

INVISIBLE END-TO-END WEB SECURITY

CodeSealers' WSF protects against Man-in-the-Browser and Man-in-the-Middle attacks. Where many products protect against known malicious attacks, WSF even protects against unknown malware and infected devices. No customer installation is required and 100% of your customers are covered when deployed.

FEATURES

Protection against Man-in-the-Browser/Middle attacks performed via Web injections, DOM manipulation, session and cookie hijacking.

Session is protected by code obfuscation and additional encryption at the client level, one step further than SSL/HTTPS and session keys.

Browser client is protected by encapsulation of the browser client and constant integrity check between customers' browser and the WSF server.

Application code is hidden and all URL's are encrypted, protecting not only customers but also your infrastructure and platform.

Forensic reports are produced whenever an incident occurs.

PLATFORM

Supports all browsers and adds an extra layer of security for all major browsers.

The solution protects across devices and even protects apps developed using web-view architecture

The solution is deployed within your own environment as a service and is completely transparent for your applications.

All major server standards are supported.

PROTECTING YOUR CUSTOMERS

NO CUSTOMER INSTALLATION REQUIRED AND 100% COVERAGE
